

# [NoTouch® Safety Proximity Sensor Control Package](#)

The [CG10009 NoTouch® Safety Proximity Sensor Control package](#) is ideal for installation on access control gates and parking gates in and around facilities with high pedestrian as well as vehicular traffic such as university campuses, downtown facilities, airports, and hospitals. The sensor detects both metallic and non-metallic objects that move into the path of the closing gate and instantly reverses the gate direction to the open position. The gate returns to normal operation once the obstruction is removed. The system can be configured to provide an output which alerts an operator or system monitor of the gate condition.

- ✍ Prevents gate from striking pedestrians and vehicles
- ✍ Senses metallic and non-metallic objects in gate path
- ✍ Instantly reverses a closing gate when an obstruction is detected
- ✍ Available for all gate sizes

[Cincinnati Gate Systems, Inc.](#) is committed to providing you with innovative, non-proprietary products to give you the flexibility to build new or to expand existing parking and access control systems seamlessly and cost-effectively, without being locked into a single equipment supplier.
